2-in. Gas/Oil/Water Flow Loop

Key Specifications

This experimental facility has been designed to study gas/liquid, liquid/liquid or gas/oil/water flows. The facility is equipped with advanced instrumentation allowing the characterization of multiphase parameters such as: liquid holdup, in-situ phase fractions, droplet size distribution, pressure drop and flow pattern. This loop can be also utilized for multiphase flow meters evaluation. The flow loop operational conditions can be expanded as well as new instrumentation can be used to characterize additional multiphase parameters.

Fluids

Gas: Air
Water: Tap Water
Oil: Mineral Oil

Operating Conditions

Maximum Pressure: 30 psig
Temperature: Ambient
Gas Flow Rate: 0 to 1.5 MMSCFD (Superficial Gas Velocity – 0 to 66 ft/s)
Water Flow Rate: 0 to 1600 BPD (Superficial Water Velocity – 0 to 4.8 ft/s)
Oil Flow Rate: 0 to 1600 BPD (Superficial Oil Velocity – 0 to 4.8 ft/s)

Test Section

Pipe Material: R-4000 PVC
Diameter of Pipe: 2 inch
Test Section: 18.0 ft (108 D)
Developing Region: 45.6 ft (274 D)
Exit Region: 10.0 ft (60D)
Inclination Angles: -90 to 90 degree
